Art Unit: 3634

Applicant's election of Species III in Paper No. 04282005 is acknowledged. 1. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP 818.03(a)).

Applicant's statement that the embodiments shown in Figures 50-53 of the instant application are the same Species and are not patentably distinct from one another is noted and accepted. Accordingly, Species III, IV, V, VI will be examined on the merits.

While the applicant has stated that claims 1-14,16-22,34-38,40-42 correspond to the elected Species, it is noted that claims 13 and 20 recite a tensioning member positioned on the threaded support rod which is indigenous to Species I, a non-elected Species, Accordingly, claims 13 and 20 are further withdrawn from consideration.

- 2. On page 46, line 9 refers to the reference numeral 6159, however, the drawings do not illustrate this reference numeral. Appropriate correction is required.
- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-12,14,16-19,21,22,34-38,40-42 are rejected under 35 U.S.C. 103 as being unpatentable over Weinreich. Weinreich discloses a window blind assembly

subject matter.

comprising a headrail 12, a tube 32, a motor 38 (note col. 3, lines 19-22), a bottom rail 14, a window covering 20, first and second lift cords 22,114, first and second guides 112 capable of directing the legs of the lift cords in a direction away from the tube toward a different end of the tube and towards the bottom rail, and a threaded support rod 60,65. Inasmuch as Weinreich discloses each feature of Species VI, wherein, the applicant has clearly stated for the record that Species III,IV,V are not patentably distinct from Species VI, those claims directed to Species III,IV,V are by the applicant's admission obvious variants over Species VI and as such fail to define patentable
